

WeldTec® COOLER STARTER KITS

Where Quality and Innovation Never Ends

Upgrade your TIG machine to water cooled torch performance.

An economical way to upgrade your TIG welder to a water cooled setup by adding a WedTec® water cooler starter kit. These new cooler kits work with Lincoln®, Miller® and other brand TIG machines. They come complete with the compact C20 water cooler, popular WT20-25 250 Amp TIG torch (25 ft.) and the special connectors and hoses needed to connect up and get started welding.

Select the "GT" gas thru connector kit or "SH" side hose connector kit depending on your machine model. Kits are available for most TIG machines.
