## GAS LENS KITS

The gas lens collet body system is a big aid for most welding applications and is essential for welding reactive metals. The gas lens virtually eliminates turbulence in the gas stream as it emerges from the nozzle. Welds are cleaner and brighter. The long stable stream of shielding gas allows the tungsten electrode to be extended farther from the end of the nozzle providing improved weld zone visibility.

These convenient kits let you experience the benefits at minimum cost.

Kit Includes (1 each):  
Collet, Gas Lens, Insulator,  
Alumina Nozzle.
